

Residential Maintenance Guide

Domain: MAINTENANCE_KNOWLEDGE | AssetBridge AI Knowledge Document

1. Preventive Maintenance Lifecycle

Overseas property preservation requires seasonal maintenance cycles: Pre-monsoon roof inspection (April & September), Bi-annual plumbing pressure test, Annual electrical insulation resistance test (Megger test), and Quarterly timber pest inspection.

2. Common Pipe Failures and Causes

Pipe leaks in Sri Lankan residential properties are primarily caused by: High municipal pressure spikes (>4.5 bar) causing joint failure, Galvanic corrosion from mixing brass and galvanized fittings, UV degradation on exposed PVC lines, and Ground settlement beneath ground slabs.

3. Water Tank & Pump Maintenance

Overhead polyethylene and concrete tanks require cleaning and disinfection every 6 months. Pressure pumps must have dry-run protection and functional expansion bladders.
