

Service Provider Availability and Skills Guide

Domain: PROVIDER_KNOWLEDGE | AssetBridge AI Knowledge Document

1. Trade Skill Categorization

Service providers must hold explicit verified skills in the registry: Plumbing (Pipe welding, PPR jointing, drainage diagnostics), Electrical (Single-phase wiring, distribution boards, surge protection), Waterproofing (Torch-on membrane, polymer slurry, elastomeric coating), and Carpentry/Roofing.

2. Real-Time Availability & Radius Filtering

Provider dispatch algorithms calculate geodesic distance from property coordinates. For emergency incidents, only providers within 20km with 'Available' status in the current time slot are ranked.

3. Coordination with Overseas Owners & Local Reps

Service providers must communicate directly through the platform chat and submit quotation line items digitally. Direct cash payments outside platform escrow/milestones are strictly prohibited.
