

Emergency Maintenance Checklist

Domain: INCIDENT_KNOWLEDGE | AssetBridge AI Knowledge Document

1. Emergency Triage Classification

Emergencies are categorized into Class A (Immediate structural collapse risk or live electrical hazard), Class B (Uncontrolled water ingress or sewer backflow), and Class C (Minor non-structural utility failure).

2. Electrical Emergencies

If sparks, burning plastic odor, or RCD trip recurrence occurs, switch off the main double-pole isolator switch. Never attempt DIY wire splicing or fuse bypassing.

3. Structural & Safety Hazards

For severe wall cracking (>5mm shear cracks), sagging ceiling joists, or waterlogged plasterboard, evacuate the affected room immediately and cordon off the threshold.

4. What Users Should NOT Do

Do not operate electrical switches while standing in water. Do not apply structural sealants over pressurized water leaks without isolating supply. Do not authorize unverified third-party contractors without representative logging.

5. Representative Mobilization Protocol

Submit emergency incident via the AssetBridge mobile app. The platform will automatically notify the verified local representative within a 15km radius.
